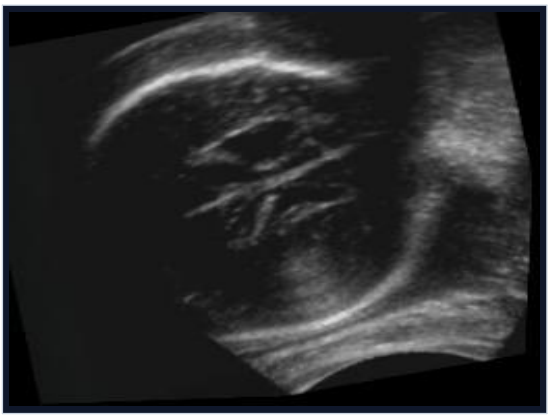
AI NEUROSONOGRAM REPORT

Report ID: AIT-FBD-000005
Scan Date: 2026-10-13 14:33:22
Status: Verified Final

PATIENT DEMOGRAPHICS & PROJECT METADATA

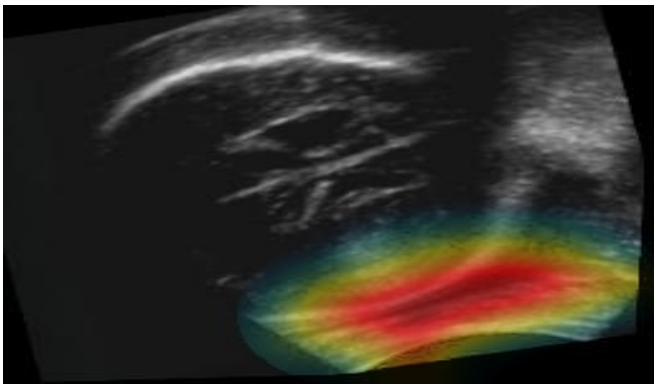
Patient Name:	vvv	**Report ID / MRN:**	AIT-FBD-000005
Contact Phone:	8585896	**Email Address:**	vv@gmail.com
Diagnostic Unit:	**Department of Radiodiagnosis & Fetal Imaging**	**Clinical Note:**	jjh

FETAL BRAIN SCAN & AI DIAGNOSTIC FINDINGS

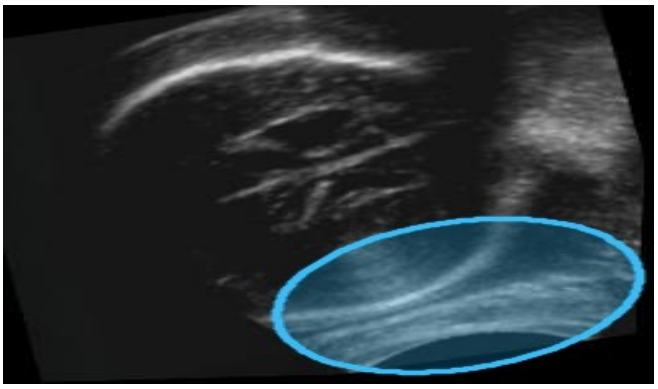


Primary AI Diagnosis:	**Cerebellah Hypoplasia**
Detection Confidence:	**97.53%** (High Certainty)
AI Architecture:	Swin Transformer (Swin-Tiny)
Scan Classification:	**ANOMALY DETECTED • CEREBELLAH HYPOPLASIA**

AI ATTENTION HEATMAP & ANOMALY SEGMENTATION



Grad-CAM Saliency Heatmap (High-Focal Attention Localization)



Anomaly Pattern Segmentation (Morphological Lesion Delineation)

CLINICAL IMPRESSION & RECOMMENDATIONS

Diagnostic Summary: The deep learning neurosonogram model identified features consistent with **Cerebellah Hypoplasia** with an AI confidence score of **97.53%**. Findings should be correlated with detailed sonographic assessment by a qualified Fetal Medicine Specialist.

Recommended Next Steps:

- High-resolution target fetal neurosonogram or fetal MRI recommended for anatomical confirmation.
- Serial ultrasound monitoring to assess lesion dimensions, mass effect, and fetal ventricular symmetry.
- Referral to a Fetal Medicine Unit for multidisciplinary evaluation and counselling.

VERIFICATION & CLINICAL REVIEW

AI System: FetalBrain AI Decision Support
Verification Code: VER-AIT-000005-X
